

Same total sets: spread them across more athletes

Logistic regression; labels = athletes × sets per exercise (all 15 exercises); ×2 / ×4 points are drawn just left of their budget; 4-set athletes are recorded on two days. 95% CI over 23 athletes.

- New (never-recorded) athletes
- Recorded athletes
- Coach's rules (new athletes)
- Same total sets: all athletes, 1 set each (on the curve)
- Same total sets: half the athletes, 2 sets each
- Same total sets: a quarter of the athletes, 4 sets each
